

## Mopeka Gateway Instructions

1. Make sure you have the latest version of the Mopeka app (2.1.18 as of 12/31/18).
  2. Open the app.
- 

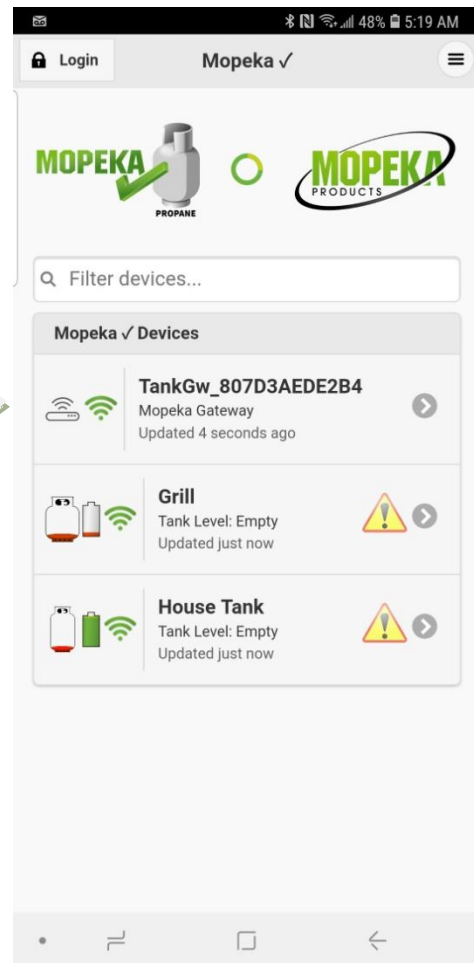

3. Use the Login button to create a new account, or login to an existing account.

4. Plug in the Gateway. Power light will flash for a few seconds then will turn off.
  5. Press the button on the Gateway, to make the Gateway visible to the app.
-

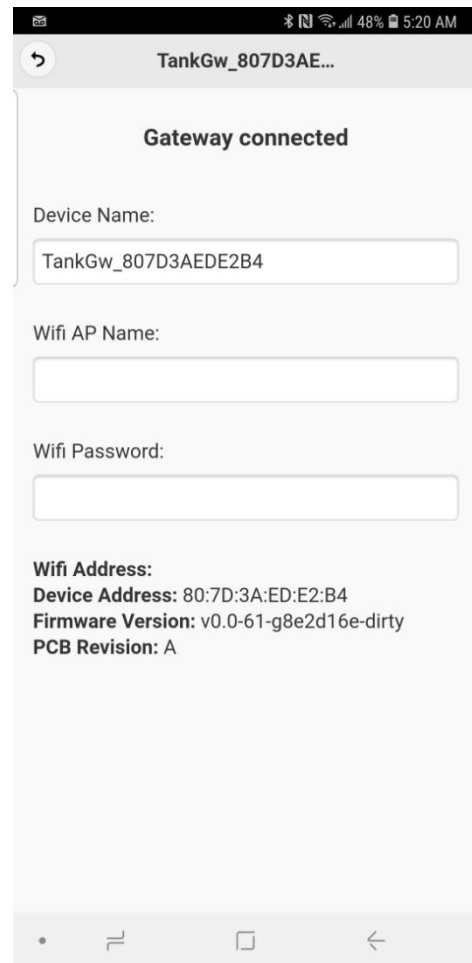

## Mopeka Gateway Instructions

6. You will then see the Gateway appear in the devices list.

## Mopeka Gateway Instructions

7. Select the Gateway. After a few seconds you will see the Gateway/Wifi connection screen.

8. Type in the case sensitive name and password of your local wifi router.

## Mopeka Gateway Instructions

- The Gateway will then connect to the router. Successful connection will be indicated by an IP address being shown in the 'Wifi Adress' field; and by a solid green light on the wifi symbol of the gateway.

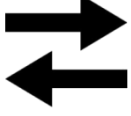

- 
- The gateway is now connected to the Mopeka cloud.

- 
- Sensor data will automatically be updated at regular intervals to the cloud. When your phone/tablet are not within blue tooth range of the sensor, the app will retrieve the most recent tank level from the cloud.
-
